

I am a happy satellite radio subscriber. It offers me choices that broadcast radio cannot (or rather \*will\* not). I can't understand why allowing satellite radio to broadcast any local content is any kind of problem other than that the huge corporations that run broadcast radio realize they can't compete with satellite radio quality and therefore are resorting to any dirty tricks they can get away with. I pay for these my satellite radio and should be able to receive any content I want.

Please reject this petition from the NAB and allow my satellite radio provider to provide with content I enjoy.
